As 16071150 and 16071150R are identical with the exception of pinout - this service alert includes pictures of both adapters to aid in identification.

The only difference is in the LONG GRAY and BLACK connectors.  
16071150R - the BLACK wires are in the A position  
16071150 - the BLACK wires are in the B position

In order to work properly, the LONG GRAY and BLACK connectors must match on both headlights. If any one of the 4 is not wired properly, the headlights will not function properly.
