HARNESS WIRE COLORS AND INSTRUCTION CLARIFICATION

The wire colors on harnesses shipped prior to September 1st, 2009 do **NOT MATCH** the colors referenced in the instructions and harness labels.

On the RELAY HARNESS, the ORANGE wire referenced in the instructions is actually two wires (RED and ORANGE) with a FEMALE QUICK CONNECT.

On the RELAY HARNESS, the BLACK/WHITE wire referenced in the instructions is actually a BLACK wire with a FEMALE QUICK CONNECT.

The GRAY wire referenced for switched ground installations may be tucked into the base of the relay module. It may be necessary to remove the base to access the gray wire.

CLARIFICATION

“SWITCHED GROUND” refers to vehicles with ground switched lighting systems (i.e. 1999-2002 GM). It does not have anything to do with whether or not the cab switch for the lights is used. Most applications will use the standard configuration.
